MEMORANDUM FOR: Deputy Director for Intelligence
Deputy Director for Plans
Deputy Director for Science & Technology
Deputy Director for Support
General Counsel
Inspector General

SUBJECT : Agenda for the Deputies Meeting on
10 February 1972

At our meeting at 2:30 on Thursday, 10 February, the following subjects will be discussed:

- a. R&D Board. A proposal will be presented for further study.
- b. Unforeseen Funding Requirements. Executive Director will initiate the discussion.
- c. Studies in Intelligence. The attached memorandum will be discussed, with a view to further study.
- d. Schedule of IG Inspections. Executive Director will initiate the discussion.

In addition, participants are invited to introduce items of new business.

MEMORANDUM FOR: Deputy Director for Intelligence
Deputy Director for Plans
Deputy Director for Science & Technology
Deputy Director for Support

SUBJECT : Research and Development

The attached memorandum represents a new approach to the difficult subject of the organization and the integration of research and development in the Agency. Its implementation will be reviewed by the Director periodically. The program implications of the procedure will be integrated into the Director's review of regular directorate program submissions.

W. E. Colby
Executive Director-Comptroller

MEMORANDUM

SUBJECT: Research and Development

*changes made in period of three
appearing in the 12 Feb 72*

1. Research and development is an inherent element of all parts of the Agency mission. Collection, analysis and production of intelligence, as well as other Agency missions, and support thereof, must be a dynamic process to overcome hostile defenses and to meet the changing requirements of the times. The Agency has been responsible for a number of R&D breakthroughs; it is important that this momentum continue against the challenges of the future.

2. R&D in the Agency can be viewed in three categories:

a. Direct support of ongoing operations, through the development of new techniques, applications or conceptual approaches closely related to well-articulated ^{needs} requirements.

b. Multipurpose R&D in support of more than one current ^{need} requirement or operation.

c. Advanced R&D, probing new areas potentially contributory to CIA's mission but where no current application or ^{need} requirement has been articulated.

- 2 -

3. Organization for R&D within CIA should reflect these varying categories, i. e. :

- a. R&D for direct support of a current ^{OPERATIONAL} ~~requirement~~ ^{need} should be conducted in the closest possible relationship with the elements responsible for the ^{OPERATIONAL} ~~requirement~~ ^{operational need}. If this can be done within the same office or directorate, it should be done in that fashion, and in any case the ^{RESPONSIBLE FOR SUPERVISING THE OPN} responsible office or directorate should have primary responsibility that such R&D is initiated, tasking others for support as needed. Funding should be programmed and controlled by the ^{FOR THE R&D} responsible office and directorate, and allocated as needed to elements supporting the R&D. All such R&D should be reported periodically to the R&D Board for review and comment.
- b. Multipurpose R&D (known to be such prior to initiation) should be reviewed by the R&D Board for assignment of responsibility to a single office or directorate, division of responsibility between offices or directorates, or the formation of a special task force from different elements for the project, with clear assignment of responsibility for the direction of the task force, its funding, and its reporting. R&D initiated in another category but proving to be multipurpose will be reviewed by the R&D Board and recommendations developed as to its future management, funding and reporting.

SECRET

- 3 -

c. Advanced R&D should be initiated, managed and funded by the Office of Research and Development, DD/S&T. Such advanced R&D should, however, be reported to and reviewed by the R&D Board and its recommendations developed as to the projects being prosecuted or other fields for suggested attention.

4. An R&D Board is established as follows:

Chairman: DD/S&T

Deputy Chairman: ADD/S&T

Members: ADDI, ADDP, ADDS

Secretary:

~~D/PPB~~
C/PPB

Technical Assistants: (nonvoting): As needed

→ on rep ???

The Board will report to the Director through the Executive Director-Comptroller. Minority opinions will be forwarded with the Chairman's comments. The Board will make a semiannual report of R&D in the Agency, with recommendations as to:

- a. Important new R&D requirements;
- b. Comments on the Agency's R&D program, in the three categories listed above;
- c. Dissemination of R&D accomplishments.

The R&D Board will also recommend the formation of technical task forces as needed, with representatives from different directorates as required, to work on particular R&D projects or programs.

ILLEGIB

- 4 -

5. Reporting on R&D will be organized as follows. Each R&D project will be separately identified, and the following reports on the project submitted to the R&D Board:

- a. Category (see above);
- b. Requirement, if any;
- c. Field (audio surveillance, agent commo, photo satellite collection, behavioral science, model analysis, administrative support, etc.);
- d. Funding;
- e. Results;
- f. Responsible office, with coordinating offices or task force;
- g. Related requirements (e.g., development of delivery procedure or system for sensor device), with responsible offices indicated.

The R&D Board will review and summarize these reports in its semiannual report to the Director.

6. Especially sensitive projects may be handled outside the above procedure at the discretion of the Deputy Director concerned with the approval of the Director of Central Intelligence.

MEMORANDUM

SUBJECT: Studies in Intelligence

1. CIA officers at all levels have become increasingly concerned with the need to expand the scope of professional dialogue throughout the Agency. This memorandum suggests how *Studies in Intelligence* could be used to achieve this goal. Like journals of other professional groups, *Studies* should serve a variety of functions: to be a continuing record of intelligence, to educate, to inform, to provide news about latest developments, and to be a forum for new ideas and techniques. *Studies* should appeal to a wide range of professionals.

2. A content analysis of selected past issues of *Studies* suggests some reasons for the journal's relative lack of appeal. The analysis revealed that very few articles dealt with controversial subjects, such as how the intelligence product is used by consumers. Many articles could only have been appreciated by those already expert in the topic discussed.

3. *Studies* is limited in scope largely because its wide circulation outside of CIA creates security problems. A first step in revitalizing the journal would be to circulate it only within CIA (and perhaps to a small audience of senior career intelligence officials outside the Agency). This would make it possible to discuss new and even contentious matters, past clandestine operations, and Agency history. We recommend that the editorial board of *Studies* survey the journal's popularity among its non-Agency subscribers. If *Studies* is not widely read, the board could eliminate its external distribution; if missed, a sanitized version of the journal could be distributed to the community.

4. There is a large CIA audience with a desire and a genuine need to read candid accounts of past Agency activities -- successes and failures. In addition, the journal could help

CONFIDENTIAL

CONFIDENTIAL

dispel some myths about the Agency. The recently published booklet entitled *Facts About CIA* (November 1971) and the Executive Director's memorandum, *FYI - Allegations and Answers*, are a good start but cannot, by their very nature, treat various subjects as thoroughly as a professional journal. Moreover, a publication that discusses topical and potentially controversial subjects about the nature of CIA's mission would greatly increase morale and understanding among our professionals.

5. A revised *Studies*, published more often, could also consider general problems of management, such as career development, the evaluation of individual performance, and the hiring and treatment of minorities. There is currently no other readily available publication for discussing these issues. Whereas a newsletter or bulletin published more frequently than a substantive journal would have some advantages in this regard, we believe that a representative editorial board should have the overall responsibility for both news and substantive articles.

6. Thus, we recommend that the editorial board of *Studies* be given a new charter, an increased subsidy, and be expanded to be more representative of the spectrum of Agency professionals. The addition of younger members of the board could have an impact in generating contributions that would appeal more to their contemporaries. Although we recognize that professionals should need no inducements to submit articles to the journal other than pride in their work, the rewards for doing so should be increased. It is a mark of considerable distinction to publish in the journals of other professional groups, and this usually has a strong bearing on one's prospects for advancement. It should not be different here.
